Project Milestone: Literature Review & Paper Presentation (draft)

Status: This milestone is ungraded for the current module but is **mandatory**. Your selections and the accompanying video will be graded as a core component of your final project.

Phase 1: Paper Selection

Each group must identify at least one foundational paper to serve as the primary reference for their project. To ensure high academic rigor, the selected paper must meet **at least one** of the following quality benchmarks:

1. **Top-Tier Conference:** Published in the **ACM SIGKDD** (Knowledge Discovery and Data Mining) conference.
2. **High Impact:** Has a verified citation count of **100+** (check Google Scholar).
3. **Prestigious Venue:** Published in high-impact journals such as ***Nature*** or ***Science***, or any journal with an **Impact Factor (IF) > 5**.

Phase 2: Video Assignment (Group Presentation)

To demonstrate your understanding of the chosen research, your group will record a brief video presentation (approx. **5-7 minutes**). This video should act as a "deep dive" into the paper for the rest of the class.

Your video must cover:

- **The "Why":** Why did you choose this paper? How does it specifically relate to your project's goals?
- **The Logic:** Briefly explain the problem the authors were trying to solve and their core methodology.
- **The Findings:** What were the key results or contributions of the paper?
- **The Critique:** What are the strengths and limitations of this approach in the context of your own project?

Submission Requirements:

- **Format:** A screencast (e.g., Zoom recording, Loom, or OBS) featuring your presentation slides with audio narration from all group members.
- **Reference:** Include a full APA/IEEE citation of the paper at the beginning of the video.

Pro-Tips for Students

- **Check the Impact Factor:** You can usually find the IF on the journal's "About" page or via the *Journal Citation Reports* (JCR) database.
- **Visuals Matter:** Don't just read the paper to us. Use diagrams, charts, or pseudocode from the paper to help visualize the authors' work.

- **Collaborate:** Ensure every team member has a speaking role in the video to receive full credit during the final project evaluation.

How this helps your project:

This assignment ensures you aren't "reinventing the wheel." By analyzing high-quality, peer-reviewed work early on, you can adopt proven methodologies and avoid common pitfalls in data mining and knowledge discovery.
